

CRYPTO Registry

KleverChain Hackathon 2022

Our vision

Crypto Registry came from an idea that we share of normalization of cryptocurrencies in our society, we have a dream to bring the crypto universe to simple day to day operations.

We built a platform that the users can sign any type of document and contracts and using the KleverChain technology.

Solution

Today we have some very bureaucratic operations, such as signing contracts, here in Brazil we depend on moving to the registry offices and sometimes waiting for hours and this is something that should be very simple.

We are in 2022, in the age of Web 3.0, we need a better way to do our negotiations!

Crypto Registry is here to uncomplicate this kind of operation and make people's lives easier, it's all about simplicity.

The Market

Every kind of negotiation requires a contract, sale of real estate, cars, partnership, even divorce papers, and we'll be here to help with it all! Any type of contract can be signed using our platform.

The solution

We can create, sign and mint a document on KleverChain only with 5 steps:

- Create your awesome seal
- Create a document and add the addresses to sign
- All addresses will seal the document
- All addresses will sign the MD5 hash of the document using your PK
- Mint the document using our KDA NFT Token.

Every NFT minted has all information into the Data, so is easily to check the truth about the document.

KleverChain Integration

- Sign MD5 hash using the PK of the address.
- Receive payment on chain to confirm the document mint.
- Mint a Non Fungible KDA Token for each document to store signatures and other informations.
